NEWS2 and eObservations Improvements

Applies to: All Users

NEWS2 is due to launch in Leeds Teaching Hospitals. This is a national requisite as part of the Sepsis CQUIN.

The main changes to the track and trigger system are as follows:

- The introduction of an alternative oxygen saturation scale (SpO2 scale 2) for use in patients with a targeted saturation of 88-92% in hypercapnic respiratory failure. Scale 2 should be selected under the instruction of a qualified clinician and documented in the medical notes. Scale 2 is only accessible by changing the settings in eObs, with the default setting being oxygen saturation scale 1.
- The extension of level of consciousness from AVPU to ACVPU where 'C' represents new confusion and is allocated a score of 3 in one parameter.
- A score of 3 in any one parameter is now highlighted in the graded response algorithm, which warrants hourly observations and for a registered nurse to inform the medical team who will review and decide if treatment escalation is necessary.

Further information on NEWS2 is available from members of the Critical Care Outreach Team or Kathryn Cole, Lead Nurse Deteriorating Patient.

<https://www.rcplondon.ac.uk/projects/outputs/national-early-warning-score-news-2>

<https://www.england.nhs.uk/ourwork/clinical-policy/sepsis/nationalearlywarningscore/>

The changes to eObservations are as follows:

- New Oxygen Saturation Scale for those with lower target saturations.
- Scale 2 will alter the NEWS calculation for patients who have been assessed as having a target O₂ saturation of 88-92%.
- New score for 'New Confusion' consciousness level.

O2 Target Saturation

☒ Scale 1 (For target SATS 94-98%)

☐ Scale 2 (Use scale 2 if target range is 88-92% eg in hypercapnic respiratory failure. Only use scale 2 under the direction of a qualified clinician. This must also be documented in medical notes)

☐ Aim for O2 saturation between % and %

Only select this option following consultation with the Medical Team

Clinical Notes

Applies to: All Users

The *Clinical Note* can be used rather than paper *Continuation Sheet* or *Nursing Evaluation Forms*.

Submission of forms create one summary view on the patient record which displays all entries, these can then be filtered by the type of note, speciality, profession, or notes created by 'you'.

A short cut to the clinical note can be found on the *Action* button drop down and *Add* button on the Health Record:

Clinical Notes: Table

NB: The *Free Text Annotation* can still be found under *Clinical Document*.

Somalogic Trial

Applies to: GP Trial Users

In Leeds, approximately 2/3 of individuals identified at high risk of diabetes are declining the National Diabetes Prevention Programme (NDPP), potentially due to a lack of patient engagement with the results provided by their regular health care team.

Public Health England would like to increase acceptance of the program to help in the prevention of diabetes in the UK. The primary aim of this study is to determine if providing a patient participant with SOMAscan insights is associated with an increase in Patient Activation (PAM® score). The secondary aim is to determine what proportion of participants change their decision to participate in a Diabetes Prevention Programme.

A trial is being run through Somalogic that requires a number of forms to be provided that allows data capture by both clinicians and patients. The patient element will use Patient Entered Data concepts delivered on the iPad.
