# Removal of shielding alerts in PPM+ - Check the General Practice tab instead

At the start of the COVID pandemic a shielding alert was developed in PPM+ for patients who are in a high risk category for developing complications from Covid19.

Following consultation with clinical colleagues, and acknowledging there are now a suite of other interventions in place to protect this cohort of patients, the IPC Operational Group agreed shielding alerts on PPM+ could be removed. This will happen on 31st March 2021.

Patients in the shielding category will still have this information listed on their PPM+ record. This will be available in the General Practice tab in PPM+.

If you click on the General Practice tab you will immediately see Emergency Codes section on the patient's primary care summary. This is where information relating to shielding will be flagged.
