Mortality Review Screening Tool Improvements

Applies to: Pilot Users

Following the Department of Health issued 'National Guidance on Learning from Deaths' In March 2017, we have introduced a Mortality Screening tool. The tool uses an electronic form which will measure certain mandatory criteria and indicate whether a case note review is necessary. A separate report will provide the appropriate details to the Specialty Mortality Leads to ensure appropriate reviews are then carried out.

For further information regarding the national guidance, [please click here](#).

Mortality Review Screening Tool

TEST, Beryl (Ms) Born **17-Oct-1990 (26y)** Gender **Female** NHS No. **999**

Address **Leeds LS1** Phone **0113** PAS No.

Criteria for Level 2 Review

* Do you believe the death was unexpected?

* Was the patient subject to a cardiac arrest call which failed to lead to return of spontaneous circulation?

* If the death was expected, was there an absence of end of life care planning or DNACPR form?

* Are you concerned that any problems in healthcare occurred?
A problem in healthcare is defined as 'any point where the patient's healthcare fell below an acceptable standard and led to harm'. E.g. Avoidable healthcare associated infection, avoidable acquired pressure ulcer, failure to respond in a timely manner to deterioration etc.

* Have you any concerns that this death was avoidable?
Even if you have slight concerns that this death was avoidable, you should refer for Structured Judgement Review

* Is this case subject to an investigation (internal or external)?

* Did the family/carers have significant concern regarding the quality of care provision in hospital?

* Was the patient admitted electively?

Unsaved changes

Remember, you can add clinical documents to a patient's record through the  button in the Single Patient View or the  in the *Action* column on the Ward Patient List.
