

Release contents v18.2.13 PPM+ Elastic Hotfix

Date Expected Live: Tuesday 29 May 2018

Contents: V18.2.13 PPM+ Elastic hotfix is a release to deploy the following:

- Fix an issue introduced in 18.2.12 whereby patient searches are being cached so that as users move onto to search new patients the old patient details are cached and refreshed every 60 seconds leading to a cumulative build up loading the elastic servers
The fix is to roll back the 18.2.12 hotfix and return printing to its state as in Release 18.1. (Custom Patient list printing will not work, other printing will be OK).

Features:

N/a

Bug Fixes:

CP-17155: LIVE - LCR Clinical Documents link not enabled

CP-17101: LIVE: Handover Print Preview: Print Preview Fails to Display (The Print Preview does not show the updated columns)

CP-17102: LIVE: PPM+ MPV Print: Print Preview "Save" Button Not Responsive

CP-17100: LIVE: Handover Print Preview: Print Preview Fails to Display (Amber Error Message appearing on the bottom right hand corner). **PARTIAL FIX:** A work around has been put in place to provide functionality over the Bank Holiday weekend (on screen guidance to point the user to a different screen where they can print the same handover note)
