Release contents v18.2.14 PPM+ Search_Interventions Hotfix

Date Expected Live: Thursday 31 May 2018

Contents: V18.2.14 PPM+ Search_Interventions hotfix is a release to deploy the following:

- Changes were made in PPM+ release 18.1 and subsequently made live in 18.2 to move PPM+ patient search from SQL to Elastic to improve the speed of search and to add new capabilities (search on patient id, NHS no etc..) However this was only a partial development and did not replicate the current capability to allow for partial searches on the patients surname. Following feedback from LTHT and LCR it has been decided to revert the search back to SQL to permit partial search on surname until this can be developed and included in the Elastic search. (Mobile will continue to use Elastic search)
- A fix to permit Desktop users will be able to withdraw eObs interventions (ceased working with 18.2 release)

Features:
N/a

Bug Fixes:
CP-17159: LIVE - eObs - Interventions not appearing in the Desktop Table view

CP-12345 - Miscellaneous Developer Enhancements

E-Forms:
