

What's New in

The latest version of PPM+ goes live on the 14th of December 2016

Community Summary

PPM+ has moved another step closer to providing a fully integrated digital care record for the City. Community care information is now shared under the *Community* tab in the Single Patient View to help improve the quality of care provided in Leeds.

The following information is now available to view under the *Community* tab:

- Live referrals to community services.
- The presence of a care plan.
- Contact details of involved care workers.
- Comprehensive FAQs to support collaborative working.

The *Community* tab is updated via a feed from [Leeds Community Healthcare NHS Trust](#) which is refreshed regularly to assure the information is kept up-to-date.

A further release (planned for the New Year) will see even more information included in the *Community* tab, including:

- Medications.
- Observations.
- Vaccinations.
- Encounters/Events.

For further information about these new features or any other training requirement please contact the Leeds Care Record Team; we are always happy to help:
