

The **Clinic List** has been updated with the following column changes:

<b><u>Outcome</u></b>	Displays whether the patient's eOutcome form has been completed.
<b><u>Phone Number</u></b>	Displays the patient's contact number (if available).
<b><u>Appointment With</u></b>	Displays the name of the clinician the patient's appointment is booked with (formerly <b>Clinic Type</b> ).
<b><u>Status</u></b>	Displays the status of the patient's appointment (formerly <b>Attended</b> ).

## Visual changes to Clinic layout

Below is a visual of how a Clinic currently looks and how it will look after the update has been applied.

This is how the **Clinic List** previously looked.

# Clinic Search Improvements

There have also been enhancements to the **Clinic Search** function

Previously, when clinics were searched for by **Clinic Name** or **Clinic Code**, results would display with the following headers:

Clinic	Usual Time	Usual Day	Usual Place
--------	------------	-----------	-------------

This caused clinics that ran on multiple days with the same clinic code to appear several times in the results, making it harder for users to find what they needed.

The enhanced **Clinic Search** function will now return results with the following headers:

Clinic	Code	Location	Site	Specialty
--------	------	----------	------	-----------

With these enhancements, searching for a clinic will now return a single, consolidated result — regardless of whether the clinic operates across multiple days or includes AM/PM sessions.

Additionally, you can now quickly view important details, including the clinic's location, hosting site, and specialty.
