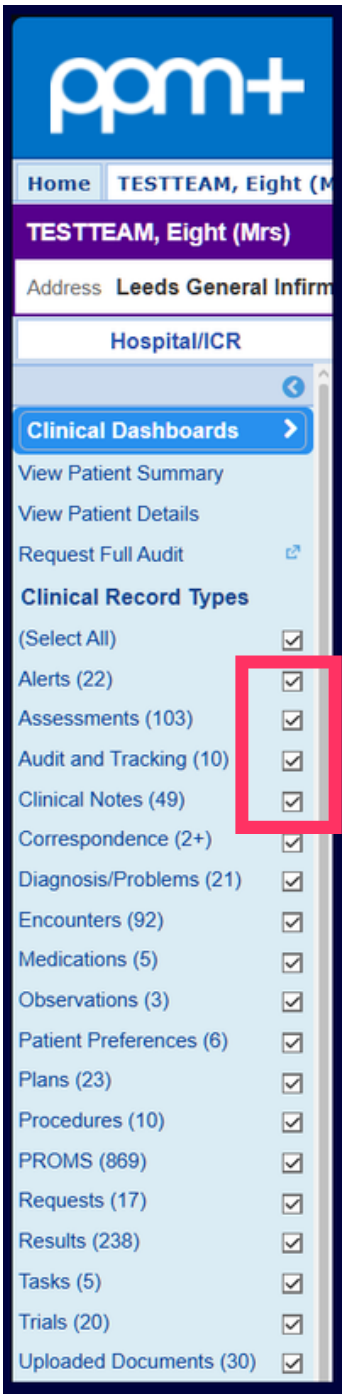
Single Patient View (SPV) updates in LEEDS CARE RECORD



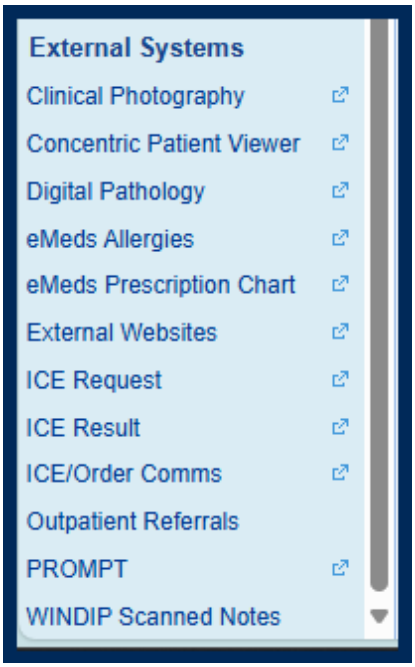
Introducing filters to the **Clinical Record Type** (down the left-hand side of a patient's PPM+ record)

This allows you to customise a patient's record so that you can easily see the relevant information you require

Filters can easily be added/removed by ticking the box to the right of the **Clinical Record type** - by default, all Record Types will be selected

Filters are session-specific and apply only to the currently viewed patient record. Navigating to a different patient will clear all active filters.

If you were to return to your original patient, after viewing another record, you would need to reapply your filters, as they do not remain active across patient records

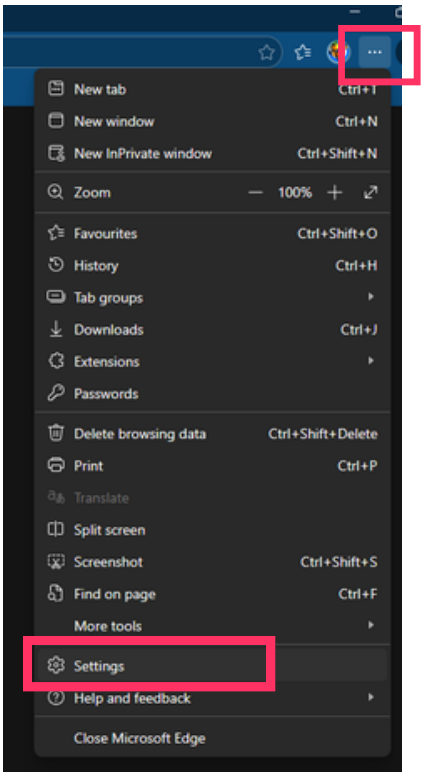


Links to **External Systems** e.g. ICE, eMeds etc... have now been grouped together and can be found underneath the new **Clinical Record type** filters

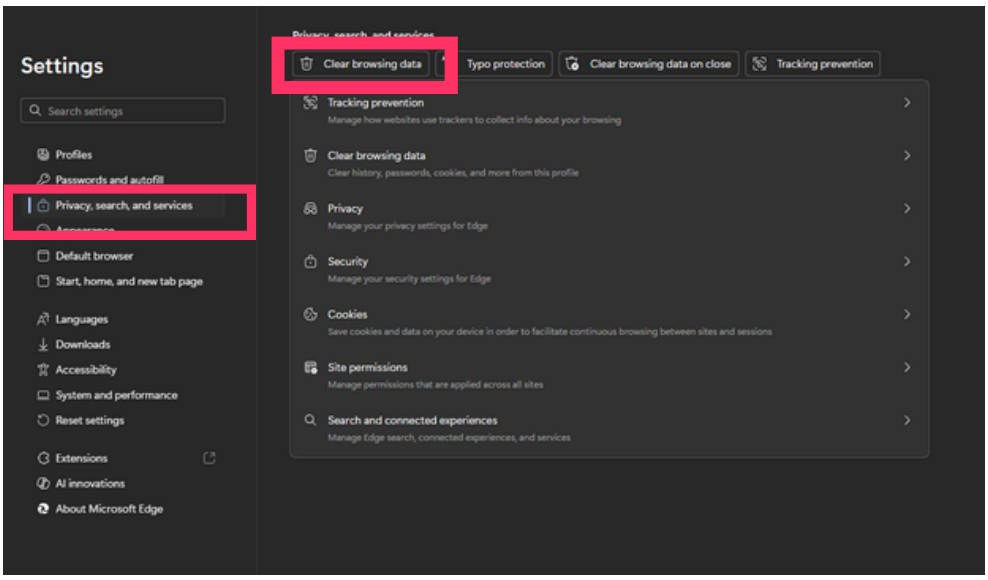
External Systems can still be accessed as normal

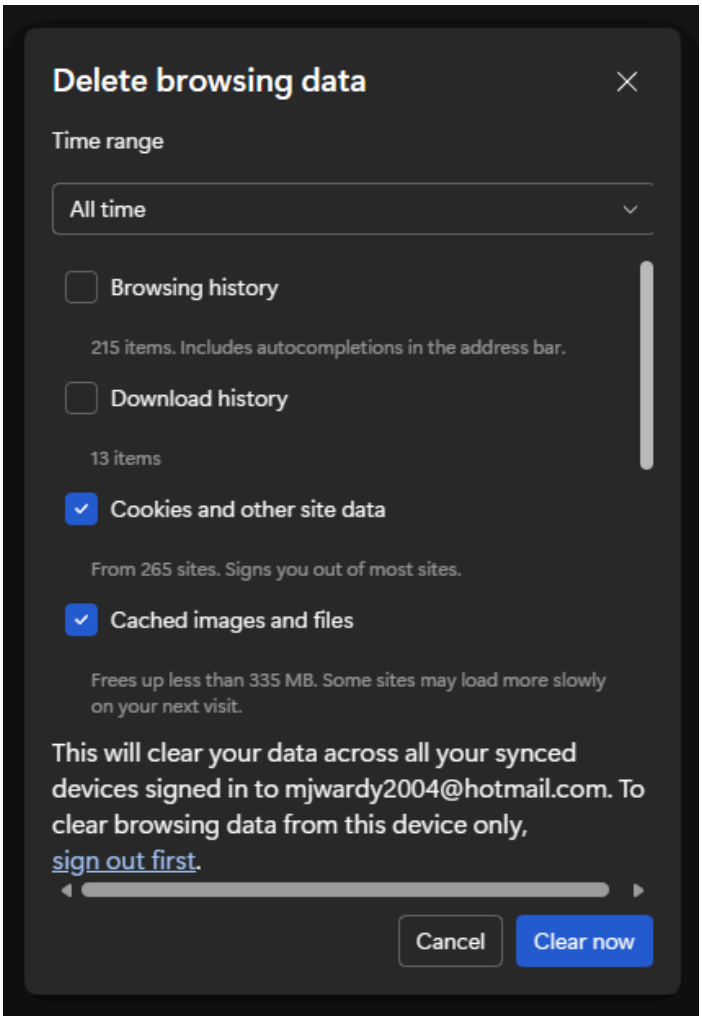
If you do not see the updates after they go live, please try clearing your browser **Cookies** and **Cache.**

To do this, open Microsoft Edge, click the **three dots (...)** in the top-right corner and then select **Settings**



Choose **Privacy, search, and services** from the left-hand menu and then select **Clear browsing data**





Set the **Time Range** to **All time** and ensure **Cookies and other site date** and **Cached images and files** are selected. Then click **Clear now**
