

# New VTE Column in ppm+ - column icons/logic

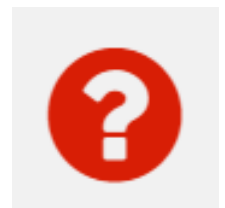

On admission the icon in the VTE column will be a red question mark.

When the first VTE risk assessment has been completed the icon will change to a green tick.

48 hours later the icon will revert to a red question mark to highlight that repeat VTE risk assessment is required.

The icon will then change back to a green tick and remain green.

However, if the patient is assessed as a high falls risk within the VTE risk assessment, a VTE risk reassessment is due every 72 hours.
