This information includes the medication, a dose or dose range, the minimum dosage interval and the **maximum dosage** per day

These columns show the time and date that the medication is available to administer from, this is based on the time it was last administered and the minimum dosage interval

Please note if a maximum daily dose has not been indicated the prescriber will need to be alerted and the relevant information inputted into eMeds before this medication can be given.

Step 1

On the Administration tab select the medication you would like to administering by selecting the white box
