

ePrescribing for Outpatients in PPM+

The PPM+ outpatient eForm V2 is now available to all prescribers. The eForm allows prescribers to generate prescriptions on PPM+ and send them electronically to LTHT Boots or Chapel Allerton outpatient pharmacy.

This paperless process aims to improve the outpatient experience for patients and staff alike - some examples include:

- Reducing patient waiting times as the patient doesn't need to walk their prescription to the dispensary.
- Electronic transfer of prescription therefore clinicians/LTHT staff do not need to physically transfer prescriptions
- Greater/easier outpatient prescription history, the eForm is and remains easily accessible on PPM+ for queries/prescribing history.

This eForm is an electronic alternative to the paper outpatient prescription form. The form does not have any decision support features, such as automated allergy, interaction or dose range checking. All these checks will have to be done manually by the prescriber.

Please note: This prescription can only be dispensed by pharmacies within the Trust and cannot be used for controlled drugs.
